Listing of Claims

51. (Cancelled).

Reasons for Allowance

1. Claims 1, 9-14, 23, 24, 31-37, 39-47, 49 and 50 will be allowed.
2. The following is an examiner's statement of reasons for allowance.

The prior art references most closely resembling the applicant's claimed invention are Xu et al (U.S. 6,324,581) and Crozier (U.S. 5,392,390).

Art Unit: 2443

First Xu disclosed a plurality of data mover computers control access to respective file system in data storage. A network client serviced by any of the data movers can access each of the file systems. If a data mover receives a client request for access to a file in a file system to which access is controlled by another data mover, then the data mover that received the client request sends a metadata request to the data mover that controls access to the file system. Xu failed to disclose “encoding a mapping data structure comprising at least one tag representing a mapping between a file in the local file system and a file in the host file system and a transfer type that defines a data format for transferring data between the host system and the local system to support remote editing of files in the host file system from the local file system, wherein the tags are in a meta language format, wherein each tag has an identifier and a set of one or more attributes, and wherein the encoded local system data structure, host system data structure, and mapping data structure form a file system connection descriptor; and using the file system connection descriptor to access the host file indicated in the mapping data structure by using the mapping data structure to determine a pattern describing a host file system type that maps to a local file system type, wherein the transfer type for the pattern defines how data is transferred between a host file of the host file system type having the determined pattern to the local file system in which the local file system type applies, wherein a first transfer type indicates to transfer one file unmodified between the host file system and the local file system, and wherein a second transfer type indicates to translate text in the file to transfer from the host file system to the local file system” (claims 1,31,41).

Second Crozier disclosed a method for the translation of dissimilarly-formatted data between disparate computer applications and platforms. However Crozier failed to disclose “encoding a mapping data structure comprising at least one tag representing a mapping between a file in the local file system and a file in the host file system and a transfer type that defines a data format for transferring data between the host system and the local system to support remote editing of files in the host file system from the

Art Unit: 2443

local file system, wherein the tags are in a meta language format, wherein each tag has an identifier and a set of one or more attributes, and wherein the encoded local system data structure, host system data structure, and mapping data structure form a file system connection descriptor; and using the file system connection descriptor to access the host file indicated in the mapping data structure by using the mapping data structure to determine a pattern describing a host file system type that maps to a local file system type, wherein the transfer type for the pattern defines how data is transferred between a host file of the host file system type having the determined pattern to the local file system in which the local file system type applies, wherein a first transfer type indicates to transfer one file unmodified between the host file system and the local file system, and wherein a second transfer type indicates to translate text in the file to transfer from the host file system to the local file system” (claims 1,31,41).

In summary, the Examiner submits that Xu and Crozier does not teach all the limitations of independent claims in combination with other elements. Specifically prior art does not teach “encoding a mapping data structure comprising at least one tag representing a mapping between a file in the local file system and a file in the host file system and a transfer type that defines a data format for transferring data between the host system and the local system to support remote editing of files in the host file system from the local file system, wherein the tags are in a meta language format, wherein each tag has an identifier and a set of one or more attributes, and wherein the encoded local system data structure, host system data structure, and mapping data structure form a file system connection descriptor; and using the file system connection descriptor to access the host file indicated in the mapping data structure by using the mapping data structure to determine a pattern describing a host file system type that maps to a local file system type, wherein the transfer type for the pattern defines how data is transferred between a host file of the host file system type having the determined pattern to the local file system in which the local file system type applies, wherein a first transfer type indicates to transfer one file unmodified between the host file system and the local file system,

Art Unit: 2443

and wherein a second transfer type indicates to translate text in the file to transfer from the host file system to the local file system"; therefore, claims 1, 9-14, 23, 24, 31-37, 39-47, 49 and 50 have been deemed allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Adnan Mirza whose telephone number is (571) 272-3885. The examiner can normally be reached on Monday through Friday from 9:30 A.M. to 6:30 P.M.
